AI Engineering Lead

Dynamic AI and Full Stack Engineering leader with a track record of delivering scalable, high-impact AI products and platforms. Proven experience leading engineering teams, designing multi-agent AI systems, and deploying production-grade LLM workflows at scale. Skilled at bridging strategy and execution, optimizing architectures, and driving cross-functional collaboration to translate advanced AI capabilities into responsible, real-world solutions. Thrives in high-impact, fast-paced environments where technical depth and leadership intersect.

Languages: HTML, CSS, JavaScript, TypeScript, Python, Go

Libraries: jQuery, Underscore.js, Lodash, React.js, Material UI, Apollo, Axios

Frameworks: Express.js, Vue.js, Next.js, Nest.js, React Native, Storybook.js, Tailwind CSS, Bootstrap, Jest

State Management: Hooks & ContextAPI, Redux, Tan Stack Query(react-query)

APIs: REST API, SOAP API, GraphQL

Databases & ORMs: MySQL, PostgreSQL, Sequelize, MongoDB, Mongoose, DGraph, DynamoDB, Dynamooose

DevOps & Tools: Git, GitHub, Jira, Figma, OAuth, Auth0, NGINX, Babel, Webpack, Docker, Vercel, CI/CD, AWS

AI & LLMs: OpenAI, Anthropic, AWS Bedrock, CrewAI, 8n8, LangChain, LangGraph, and Langflow

Professional Software Experience

Full Stack AI Engineer, Midwestern Interactive

8/2025 - Present

Next.js / TypeScript / Postgres / Docker / AWS / Agno / LangChain / AI / Python

- Led the design and delivery of an AI-as-a-Service platform, integrating multi-agent workflows and autonomous reasoning to enable scalable AI-driven decision-making.
- Directed end-to-end security and compliance architecture, implementing zero-trust guardrails, SSO, and fine-grained access controls (RLS/CLS) across all systems.
- Built a dynamic AI interface supporting multiple chat sessions, RAG pipelines, and contextual data integration, driving seamless user experiences.
- Orchestrated fine-tuning and deployment of self-hosted LLMs, creating production-ready RAG pipelines and database integrations for AI workflows.
- Architected and executed AWS deployment strategy, including VPC setup, security groups, S3/ECR management, Secrets Manager, RDS, Docker builds, IAM roles, ALB/ACM configuration, and SES email integration.
- Partnered across teams to align product strategy with AI engineering execution, ensuring robust, scalable, and enterprise-grade AI solutions.

Full Stack Software Engineer, Metapause, Inc.

3/2025 - 7/2025

Vue.js / Node.js / TypeScript / Postgres / Docker / AWS / DigitalOcean / Shopify / AI / AWS Bedrock

- Led the enhancement of AI architecture by integrating agentic RAG with Cache-Augmented Generation (CAG), enabling persistent memory, faster responses, and improved contextual relevance across personalized user workflows.
- Designed and deployed specialized AI agents using CrewAI and 8n8 to automate complex workflows, including medical literature analysis, content marketing generation, and document ingestion, significantly expanding ELSA AI's knowledge base and personalization capabilities.
- Architected and implemented a custom Shopify integration to support AI-curated and user-submitted product catalogs, driving enhanced user engagement and automation.
- Directed Postgres schema refactors, implementing data normalization and production-grade migrations to support scalable AI applications.

- Oversaw containerization of services with Docker and managed deployments across AWS and DigitalOcean, ensuring secure, reliable, and maintainable infrastructure.
- Partnered cross-functionally with frontend, backend, and AI teams to deliver a high-impact women's health platform, aligning AI capabilities with product strategy and user needs.

Full Stack Software Engineer, Alphana, Inc.

11/2024 - 4/2025

NextJS / NestJS / DynamoDB / Postgres / Hooks / Python / TypeScript / OpenAI / AWS / Golang / AI

- Architected and deployed a CrewAI-based multi-agent system to analyze and index user content libraries, enabling intelligent LLM-driven retrieval, improved data reuse, and scalable knowledge management.
- Directed LLM training and fine-tuning initiatives, curating high-quality prompt-response datasets and optimizing generation parameters to enhance output accuracy, brand alignment, and AI performance.
- Established full-stack testing standards with 100% Jest coverage across frontend and backend systems, ensuring reliability, maintainability, and production readiness.
- Designed and implemented a scalable webhook system for seamless third-party integrations, leveraging NestJS, TypeScript, Python, and AWS to improve operational efficiency and client satisfaction.
- Optimized serverless architecture by refactoring Lambda functions to Go, reducing cold starts, improving execution speed, and enabling high-concurrency workloads for enterprise-scale.

Lead Software Engineer, CyberRisk Alliance, LLC

6/2022 - 7/2023

NextJS / TypeScript / Hooks / GraphQL / StorybookJS / Auth0 / AWS / ReactBootstrap / WordPress / PHP

- Led and mentored a team of 12 engineers, overseeing maintenance and enhancement of 14 headless WordPress sites, improving performance and scalability by 30% while fostering team growth and operational excellence.
- Directed the development and launch of web applications using Next.js, TypeScript, and Storybook.js, driving 25% faster delivery through reusable component design and streamlined workflows.
- Designed and implemented an integrated Help Desk system across Monday.com, YouTrack, and Outlook, increasing issue resolution efficiency by 40% and improving cross-team coordination.
- Partnered with senior leadership to define and execute technology, design, and content strategies, achieving a 20% increase in user engagement and a 15% growth in site traffic while aligning initiatives with organizational goals.

Co-Founder, Product & Software Engineer, Charla Technologies, Inc.

7/2021 - 12/2022

NextJS / Hooks / Apollo GraphQL / DGraph / OAuth2.0 / AWS / Tailwind CSS / Slack API / Golang

- Spearheaded the design and delivery of an analytics SaaS platform, integrating social media data from multiple sources, increasing data processing speed by 50% and enabling actionable insights for users.
- Directed back-end architecture and optimized GraphQL schemas, improving data retrieval times by 35% for thousands of users and millions of messages, while ensuring scalability for growth.
- Led the transition of the back-end codebase from JavaScript to TypeScript, enhancing maintainability, reducing runtime errors by 20%, and setting engineering standards for the team.
- Oversaw the setup and deployment of CI/CD pipelines on AWS, achieving 99.9% production uptime and establishing a reliable foundation for future platform expansion.

Education

Full Stack Software Engineer - Hack Reactor, Software Engineering Immersive, Remote

Bachelor of Science, Mechanical Engineering, State University of New York, Buffalo, NY

Associate of Science, Engineering Science, Erie Community College

Associate of Science, Math, Erie Community College
